MEDICO solutions

Everything within reach

Duelco produces custom medical solutions and is particularly renowned for bedhead units offering installation options for power, data, patient call systems, gases, vacuum, patient entertainment and diurnal rhythm lighting, for example, where the light colour and intensity are adjusted.

Duelco Capri is available with two or three tracks and a wall rail that can be positioned centrally, at the top or the bottom, or vertically. To ensure the greatest possible flexibility and compatibility with existing systems, Duelco Capri can be fitted with 80 mm systems. It can also be fitted with the narrow 45 mm modules – Duelco is the only company offering these.

All Duelco Capri modules are supplied as customised plug and play solutions as Duelco undertakes the internal adaptation of the installation equipment on the basis of customers' requests and needs. This allows all kinds of options such as LED lighting, patient call systems and anaesthetic suction systems to be integrated.

Recovery environment

Design, aesthetics, light, colours and physical surroundings all affect our bodies, mental health and well-being. With architecture focusing on recovery, it is possible to reduce stress and create a sense of security which has a positive effect on patients, their treatment and even the work environment

Duelco supplies custom ward panels with concealed installations for power, data, air and medical gas supplies, patient call systems, patient entertainment and diurnal rhythm lighting, for example, which adjusts the colour and intensity of the light.

These solutions are designed and developed individually in consultation with developers, architects or other advisors so that the results are harmonious and form a natural part of the recovery environment.

Electrical panels

Duelco has a wide range of products for the hospital sector, such as power panels with hospital power points where several sockets are needed. The many attachment fittings available allow mounting on any type of equipment, tables, walls, etc. Duelco Hospital Panels are the market's most compact, and can be fitted with any type of switch, PDS, etc.

The power panel has an elegant aluminium profile to which all electrical equipment can be connected. The standard configuration consists of three or five hospital power points with an indicator lamp and is fitted with a hospital power cable, with sockets, in lengths of 1, 3 or 4.5 m. The hospital cable is terminated in the aluminium profile with an EMC coupling, to ensure that the shielding terminates in the profile.
